

# VGR/VGFCB-170H / 170R / 170F-H / 170F-R 110-IDC/ 40-A

The VGRCB-170 is a medium density contact block designed for use with ribbon cables plugging directly onto the back of the interconnect blocks. The block is sold fully loaded.

#### **Application Notes**

\*Wire wrap current rating is 5 amps. The current limit through a BergConconnection is 3 amps maximum. For the VGR/VGFCB-170F-H squaretail configurations, all wire wrap sockets are aligned to allow use of BergCon or similar 0.100" center-to-center connectors. Note: The termination to the ground plane is done on the receiver-side contact blocks only. The fixture side contacts use a standard VGFCB-170F-H contact block for all contact configurations. The VGRCB-170F-H is a universal high-density contact block suitable for analog and digital applications alike. For applications such as twisted pair that may require shielding or ground planes on the connector blocks, the VGRCB-40AF (40 Active Lines) and VGRCB-110-IDCF (110 Active Lines) use the VGRCB-170 as a foundation, adding the respective ground planes (below) to the receiver-side contact blocks to aid in suppressing high frequency noise and crosstalk. The VGRCB-170F-H is manufactured for wire wrap connections and connector applications. With their aligned square tails, the VGRCB-170F-H contacts maximize surface contact with mating connectors or wire wrap posts. Optionally, the VGRCB-170HF-R (round tails) can be used for mating connector applications also. Two precision alignment pins per block ensure proper alignment. Two shoulder mounting screws per VGR block allow the block to float in the receiver. Blocks are fully loaded and sold separately.
